# Assignment 1

Student Name: Suryansh Gehlot

Branch: Computer Science and Engineering

Semester: 5th

UID: 22BCS10900

Section/Group:22BCSFL-603 A

Date of Performance: 19/12/24

1. Sum of Natural Numbers up to N

Objective

Calculate the sum of all natural numbers from 1 to n, where n is a positive integer.

Use the formula: Sum =  $n \times (n + 1) / 2$ .

**Input Format** 

One integer n, the upper limit for calculating the sum.

Constraints

 $1 \le n \le 104$ 

Output Format

Print the sum of all natural numbers from 1 to n.

**Test Cases** 

Input: 5 Output: 15

Input: 100 Output: 5050

Input: 1 Output: 1

Code:

#include <iostream>

```
int sum_of_natural_numbers(int n) {
   return n * (n + 1) / 2;
}
int main() {
   cout << sum_of_natural_numbers(5) << endl;
   cout << sum_of_natural_numbers(100) << endl;
   return 0;
}</pre>
```

#### 2. Check if a Number is Prime

Objective

Check if a given number n is a prime number.

Input Format

One integer n.

Constraints

 $2 \le n \le 105$ 

**Output Format** 

Print "Prime" if n is a prime number, otherwise print "Not Prime".

**Test Cases** 

Input: 7 Output: Prime

Input: 9 Output: Not Prime

Input: 2 Output: Prime

Code:

```
#include <iostream>
using namespace std;
string is_prime(int n) {
  if (n <= 1) return "Not Prime";
  if (n <= 3) return "Prime";
  if (n % 2 == 0 \parallel n % 3 == 0) return "Not Prime";
  for (int i = 5; i * i <= n; i += 6) {
     if (n \% i == 0 || n \% (i + 2) == 0) return "Not Prime";
  }
  return "Prime";
}
int main() {
  cout << is_prime(7) << endl;</pre>
  cout << is_prime(9) << endl;</pre>
  return 0;
}
```

3. Print Odd Numbers up to N

Objective

Print all odd numbers between 1 and n, inclusive.

Input Format

One integer n, the upper limit of the range.

Constraints

 $1 \le n \le 104$ 

**Output Format** 

A single line containing all odd numbers from 1 to n, separated by spaces.

**Test Cases** 

Input: 10 Output: 1 3 5 7 9

Input: 7 Output: 1 3 5 7

Input: 1 Output: 1

## Code:

```
#include <iostream>
using namespace std;

void print_odd_numbers(int n) {
  for (int i = 1; i <= n; i += 2) {
     cout << i << " ";
  }
  cout << endl;</pre>
```

```
int main() {
    print_odd_numbers(10);
    return 0;
}
```

4. Sum of Odd Numbers up to N

Objective

Calculate the sum of all odd numbers from 1 to n.

Input Format

One integer n.

Constraints

 $1 \le n \le 104$ 

Output Format

Print the sum of all odd numbers from 1 to n.

**Test Cases** 

Input: 5 Output: 9

Input: 10 Output: 25

Input: 1 Output: 1

Code:

#include <iostream>

```
int sum_of_odd_numbers(int n) {
    int sum = 0;
    for (int i = 1; i <= n; i += 2) {
        sum += i;
    }
    return sum;
}

int main() {
    cout << sum_of_odd_numbers(5) << endl;
    return 0;
}</pre>
```

# 5. Print Multiplication Table of a Number

Objective

Print the multiplication table of a given number n.

**Input Format** 

One integer n.

Constraints

$$1 \le n \le 100$$

**Output Format** 

For each integer i from 1 to 10, print the product  $n \times i$  in the format:  $n \times i = product$ .

**Test Cases** 

Input: 3 Output:  $3 \times 1 = 3 \times 2 = 6 \dots 3 \times 10 = 30$ 

```
Input: 7 Output: 7 \times 1 = 7 \dots 7 \times 10 = 70
Input: 10 Output: 10 \times 1 = 10 \dots 10 \times 10 = 100
Code:
#include <iostream>
using namespace std;
void multiplication_table(int n) {
  for (int i = 1; i \le 10; ++i) {
     cout << n << " x " << i << " = " << n * i << endl;
  }
}
int main() {
  multiplication_table(3);
  return 0;
}
```

# 6. Count Digits in a Number

Objective

Count the total number of digits in a given number n.

Input Format

One integer n.

```
Constraints
1 \le n \le 109
Output Format
Print the total number of digits in n.
Test Cases
Input: 12345 Output: 5
Input: 900000 Output: 6
Input: 1 Output: 1
Code:
#include <iostream>
using namespace std;
int count_digits(int n) {
  return to_string(n).length();
}
int main() {
  cout << count_digits(12345) << endl;</pre>
  return 0;
}
```

## Objective

Reverse the digits of a given number n.

Input Format

One integer n.

Constraints

 $1 \le n \le 109$ 

**Output Format** 

Print the number with its digits in reverse order.

**Test Cases** 

Input: 12345 Output: 54321

Input: 9876 Output: 6789

Input: 1000 Output: 1

#### Code:

```
#include <iostream>
using namespace std;

int reverse_number(int n) {
  int reversed = 0;
  while (n > 0) {
    reversed = reversed * 10 + n % 10;
    n /= 10;
  }
```

```
return reversed;
}
int main() {
  cout << reverse_number(12345) << endl;</pre>
  return 0;
}
```

8. Find the Largest Digit in a Number

Objective

Find the largest digit in a given number n.

Input Format

One integer n.

Constraints

 $1 \le n \le 109$ 

**Output Format** 

Print the largest digit in n.

Test Cases

Input: 2734 Output: 7

Input: 9450 Output: 9

Input: 1111 Output: 1

#include <iostream>

```
int largest_digit(int n) {
  int largest = 0;
  while (n > 0) {
     int digit = n \% 10;
     if (digit > largest) {
        largest = digit;
     }
     n = 10;
  return largest;
}
int main() {
  cout << largest_digit(2734) << endl;</pre>
  return 0;
}
```

## 9. Check if a Number is a Palindrome

Objective

Check whether a given number is a palindrome or not.

Input Format

One integer n.

Constraints

```
1 \le n \le 109
Output Format
Print "Palindrome" if the number is a palindrome, otherwise print "Not Palindrome".
Test Cases
Input: 121 Output: Palindrome
Input: 12345 Output: Not Palindrome
Input: 12321 Output: Palindrome
#include <iostream>
using namespace std;
string is_palindrome(int n) {
  string str = to_string(n);
  string reversed_str = string(str.rbegin(), str.rend());
  return str == reversed_str ? "Palindrome" : "Not Palindrome";
}
int main() {
  cout << is_palindrome(121) << endl;</pre>
  cout << is_palindrome(12345) << endl;</pre>
  return 0;
}
```

## Objective

Calculate the sum of the digits of a given number n.

Input Format

One integer n.

Constraints

 $1 \le n \le 109$ 

**Output Format** 

Print the sum of the digits of n.

**Test Cases** 

Input: 12345 Output: 15

Input: 4567 Output: 22

Input: 999 Output: 27

#### Code:

```
#include <iostream>
using namespace std;

int sum_of_digits(int n) {
  int sum = 0;
  while (n > 0) {
    sum += n % 10;
    n /= 10;
}
```

```
return sum;
}
int main() {
  cout << sum_of_digits(12345) << endl;
  return 0;
}</pre>
```

11. Function Overloading for Calculating Area

Objective

Write a program to calculate the area of different shapes using function overloading.

Input Format

The program should accept:

- 1. Radius of the circle for the first function.
- 2. Length and breadth of the rectangle for the second function.
- 3. Base and height of the triangle for the third function.

#### **Constraints**

 $1 \le \text{radius}$ , length, breadth, base, height  $\le 103$  Use 3.14159 for the value of  $\pi$ .

**Output Format** 

Print the computed area of each shape in a new line.

**Test Cases** 

Input: Radius = 5 Length = 4, breadth = 6 Base = 3, height = 7

Output: 78.53975 24 10.5

Input: Radius = 10 Length = 15, breadth = 8 Base = 12, height = 9

```
Output: 314.159 120 54
Problem 11: Calculate Factorial of a Number
Objective
Calculate the factorial of a given number nn.
Input Format
One integer nn.
Constraints
Output Format
Print the factorial of the number nn.
Code
#include <iostream>
using namespace std;
int factorial(int n) {
  int fact = 1;
  for (int i = 1; i \le n; i++) {
    fact *= i;
  }
  return fact;
}
int main() {
```

int n;

```
cin >> n;
cout << factorial(n) << endl;
return 0;
}</pre>
```

```
Problem 12: Count Digits in a Number
```

Objective

Count the total number of digits in a given number nn.

Input Format

One integer nn.

Constraints

**Output Format** 

Print the total number of digits in nn.

Code

#include <iostream>

```
int countDigits(int n) {
  int count = 0;
  while (n > 0) {
    n /= 10;
    count++;
  }
```

```
return count;
}

int main() {
    int n;
    cin >> n;
    cout << countDigits(n) << endl;
    return 0;
}

Problem 13: Reverse a Number
Objective
Reverse the digits of a given number nn.
Input Format
One integer nn.
```

**Constraints** 

**Output Format** 

#include <iostream>

using namespace std;

int reverseNumber(int n) {

Code

Print the number with its digits in reverse order.

```
Discover. Learn. Empower.
```

```
int reversed = 0;
while (n > 0) {
    reversed = reversed * 10 + n % 10;
    n /= 10;
}
return reversed;
}

int main() {
    int n;
    cin >> n;
    cout << reverseNumber(n) << endl;
    return 0;
}</pre>
```

Problem 14: Find Largest Digit in a Number

Objective

Find the largest digit in a given number nn.

Input Format

One integer nn.

**Constraints** 

 $1 \le n \le 1091 \leq n \leq 10^9$ 

Output Format

Print the largest digit in nn.

```
Code
#include <iostream>
using namespace std;
int largestDigit(int n) {
  int largest = 0;
  while (n > 0) {
     int digit = n \% 10;
     if (digit > largest) {
       largest = digit;
     n = 10;
  return largest;
}
int main() {
  int n;
  cin >> n;
  cout << largestDigit(n) << endl;</pre>
  return 0;
}
```

## Objective

Check whether a given number is a palindrome or not.

```
Input Format
```

One integer nn.

Constraints

**Output Format** 

#include <iostream>

Print "Palindrome" if the number is a palindrome, otherwise print "Not Palindrome".

#### Code

```
using namespace std;
bool isPalindrome(int n) {
  int original = n, reversed = 0;
  while (n > 0) {
    reversed = reversed * 10 + n % 10;
    n /= 10;
  }
  return original == reversed;
}
```

```
int n;
cin >> n;
```

int main() {

```
if (isPalindrome(n)) {
    cout << "Palindrome" << endl;
} else {
    cout << "Not Palindrome" << endl;
}
return 0;
}</pre>
```

Problem 16: Sum of Digits of a Number

Objective

Calculate the sum of the digits of a given number nn.

**Input Format** 

One integer nn.

Constraints

 $1 \le n \le 1091 \leq n \leq 10^9$ 

**Output Format** 

Print the sum of the digits of nn.

Code

#include <iostream>

```
int sumOfDigits(int n) {
  int sum = 0;
  while (n > 0) {
```

```
sum += n % 10;
n /= 10;
}
return sum;
}
int main() {
  int n;
  cin >> n;
  cout << sumOfDigits(n) << endl;
  return 0;
}</pre>
```

Problem 17: Print Fibonacci Series up to N Terms

Objective

Print the Fibonacci series up to nn terms.

Input Format

One integer nn.

Constraints

**Output Format** 

Print the Fibonacci series up to nn terms.

Code

#include <iostream>

using namespace std;

```
void printFibonacci(int n) {
  int a = 0, b = 1;
  for (int i = 1; i \le n; i++) {
     cout << a << " ";
     int next = a + b;
     a = b;
     b = next;
  }
  cout << endl;</pre>
}
int main() {
  int n;
  cin >> n;
  printFibonacci(n);
  return 0;
}
```

Problem 18: Check Armstrong Number

Objective

Check if a given number is an Armstrong number.

Input Format

```
One integer nn.
Constraints
Output Format
Print "Armstrong" if the number is an Armstrong number, otherwise print "Not
Armstrong".
Code
#include <iostream>
#include <cmath>
using namespace std;
bool isArmstrong(int n) {
  int original = n, sum = 0;
  int digits = log10(n) + 1;
  while (n > 0) {
    int digit = n \% 10;
    sum += pow(digit, digits);
    n = 10;
  }
  return sum == original;
}
int main() {
  int n;
```

```
cin >> n;
if (isArmstrong(n)) {
   cout << "Armstrong" << endl;
} else {
   cout << "Not Armstrong" << endl;
}
return 0;
}</pre>
```

Problem 19: Find GCD of Two Numbers

Objective

Calculate the greatest common divisor (GCD) of two given numbers.

Input Format

Two integers aa and bb.

**Constraints** 

 $1 \le a,b \le 1051 \setminus leq a, b \setminus leq 10^5$ 

**Output Format** 

Print the GCD of aa and bb.

Code

#include <iostream>
using namespace std;

```
int gcd(int a, int b) {
    while (b != 0) {
```

```
int temp = b;
b = a % b;
a = temp;
}
return a;
}

int main() {
  int a, b;
  cin >> a >> b;
  cout << gcd(a, b) << endl;
  return 0;
}</pre>
```
